

Summer Math Practice

- ✓ All CES students grades K - 5 are being asked to complete math work over the summer. It is **not** mandatory, but is recommended. There are many rewards for completing this work, but no consequences for not participating.
- ✓ The work in these packets has been selected by your child's math teachers and myself to reinforce math concepts and skills learned in the grade level they just completed.
- ✓ Completing this work will help students be prepared for the math they will start in the Fall when they return to school.
- ✓ Students should not try to complete the work in one day, but rather follow the suggested time line on the calendar.
- ✓ Completed packets are due back to your child's new teacher the first week of school.
- ✓ Students can also practice on math websites and apps, please see attached list of websites. To find apps, just search "free math games" on your smartphone.
- ✓ There are no problems at any grade level that require the use of a calculator, so please do not provide one for your child to use.
- ✓ This practice work should be presented in a positive manner as part of a daily routine with reminders that the biggest prize they will receive is being ready for the next grade level!
- ✓ However... all students who complete this work will be awarded a coupon for free ice cream in September.
- ✓ If you have any questions, please email ehines@catskillcsd.org.
